

Global United Technology Services Co., Ltd.

Report No.: GTSE14070135301

FCC Report (Mobile Phone)

Applicant: NEG TECHNOLOGY CO., LIMITED

Address of Applicant: Rm 1406, Block B, Jinsejiari, Jingtian south road, Futian

district, Shenzhen, China

Equipment Under Test (EUT)

Product Name: Mobile Phone

Model No.: S3030D

Trade Mark: OWN

FCC ID: 2AAZ8-S3030D

Applicable standards: FCC CFR Title 47 Part 2: 2013

FCC CFR Title 47 Part22 Subpart H: 2013 FCC CFR Title 47 Part24 Subpart E: 2013

Date of sample receipt: August 04, 2014

Date of Test: August 04-07, 2014

Date of report issued: August 08, 2014

Test Result : PASS *

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the GTS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of GTS or testing done by GTS in connection with, distribution or use of the product described in this report must be approved by GTS in writing.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

Regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

Final test channel:

| GSM 850 | | PCS1900 | | WCDMA Band II | |
|---------|--------------------|---------|--------------------|---------------|--------------------|
| Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 128 | 824.20 | 512 | 1850.20 | 9262 | 1852.40 |
| 190 | 836.60 | 661 | 1880.00 | 9400 | 1880.00 |
| 251 | 848.80 | 810 | 1909.80 | 9538 | 1907.60 |

Shenzhen, China 518102

5.3 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is filing to comply with Section Part 22 subpart H and Part 24 subpart E of the FCC CFR 47 Rules.

5.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures document on TIA/EIA 603 and FCC CFR 47.1046, 2.1047, 2.1049, 2.1051, 2.1053, 2.1055 and 2.1057

5.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• CNAS —Registration No.: CNAS L5775

CNAS has accredited Global United Technology Services Co., Ltd. To ISO/IEC 17025 General Requirements for the competence of testing and calibration laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

• FCC —Registration No.: 600491

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 600491, June 28, 2013.

• Industry Canada (IC) —Registration No.: 9079A-2

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, June 26, 2013.

5.6 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.

Address: 2nd Floor, Block No.2, Laodong Industrial Zone, Xixiang Road Baoan District, Shenzhen,

China

Tel: 0755-27798480 Fax: 0755-27798960

7 System test configuration

7.1 Test mode

During all testing, EUT is in link mode with base station emulator at maximum power level. The spurious emission measurements were carried out in semi-anechoic chamber with 3-meter test range, and EUT is rotated on three test planes to find out the worst emission.

| Test modes | | | | | | | |
|---------------|---------------------|---------------------|--|--|--|--|--|
| Band | Radiated | Conducted | | | | | |
| GSM 850 | ■ GSM link | ■ GSM link | | | | | |
| | ■ GPRS 1 link | ■ GPRS 1 link | | | | | |
| | ■ EGPRS 1 link | ■ EGPRS 1 link | | | | | |
| PCS 1900 | ■ GSM link | ■ GSM link | | | | | |
| | ■ GPRS 1 link | ■ GPRS 1 link | | | | | |
| | ■ EGPRS 1 link | ■ EGPRS 1 link | | | | | |
| WCDMA Band II | ■ RMC 12.2Kbps link | ■ RMC 12.2Kbps link | | | | | |

Note: The maximum power levels are GSM mode for GMSK link, GPRS multi-slot class 8 mode for GMSK link, EGPRS multi-slot class 8 mode for 8PSK link, RMC12.2Kbps mode for WCDMA Band II. Only these modes were used for all tests.

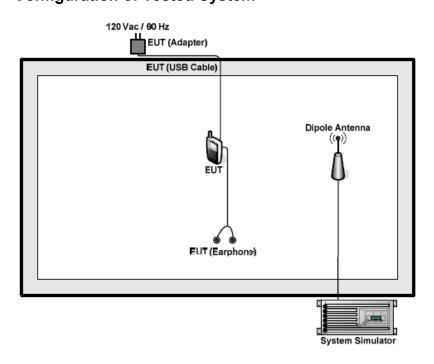

The conducted power tables are as follows:

| Conducted Power (dBm) | | | | | | |
|-------------------------|--------|--------|--------|---------|---------|---------|
| Band | | GSM850 | | | PCS1900 | |
| Channel | 128 | 190 | 251 | 512 | 661 | 810 |
| Frequency | 824.20 | 836.60 | 848.80 | 1850.20 | 1880.00 | 1909.80 |
| GSM (GMSK, 1 TX slot) | 32.49 | 32.57 | 32.64 | 29.66 | 29.51 | 29.48 |
| GPRS (GMSK, 1 TX slot) | 32.48 | 32.56 | 32.63 | 29.59 | 29.45 | 29.44 |
| GPRS (GMSK, 2 TX slot) | 31.76 | 31.84 | 31.92 | 28.95 | 28.77 | 28.70 |
| GPRS (GMSK, 3 TX slot) | 29.97 | 30.09 | 30.22 | 27.28 | 27.01 | 26.92 |
| GPRS (GMSK, 4 TX slot) | 28.96 | 29.09 | 29.20 | 26.24 | 26.00 | 25.88 |

7.2 Configuration of Tested System

7.3 Conducted Peak Output Power

| Test Requirement: | FCC part22.913(a) and FCC part24.232(b) | | | | | |
|-------------------|--|--|--|--|--|--|
| Test Method: | FCC part2.1046 | | | | | |
| Limit: | GSM850,: 7W | | | | | |
| | PCS1900, WCDMA Band V: 2W | | | | | |
| Test setup: | EUT Splitter Communication Tester Power meter | | | | | |
| | Power meter | | | | | |
| | Note: Measurement setup for testing on Antenna connector | | | | | |
| Test Procedure: | The transmitter output port was connected to base station. | | | | | |
| | The RF output of EUT was connected to the power meter by RF cable and attenuator, the path loss was compensated to the results for each measurement. | | | | | |
| | Set EUT at maximum power through base station. | | | | | |
| | 4. Select lowest, middle, and highest channels for each band and different modulation. | | | | | |
| | 5. Measure the maximum burst average power. | | | | | |
| Test Instruments: | Refer to section 6.0 for details | | | | | |
| Test mode: | Refer to section 5.3 for details | | | | | |
| Test results: | Pass | | | | | |

7.5 MODULATION CHARACTERISTIC

According to FCC § 2.1047(d), Part 22H & 24E there is no specific requirement for digital modulation, therefore modulation characteristic is not presented.

7.6 Out of band emission at antenna terminals

7.7 ERP, EIRP Measurement

| Test Procedure: | The EUT was placed on an non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer. |
|-------------------|--|
| | During the measurement, the EUT was communication with the station. The highest emission was recorded with the rotation of the turntable and the lowering of the test antenna from 4m to 1m. The reading was recorded and the field strength (E in dBuV/m) was calculated. |
| | 3. ERP in frequency band 824.2 –848.80.8MHz were measured using a substitution method. The EUT was replaced by dipole antenna connected, the S.G. output was recorded and ERP was calculated asfollows: |
| | ERP = S.G. output (dBm) + Antenna Gain (dBd) - Cable Loss (dB) |
| | 4. EIRP in frequency band 1850.2 –1909.8MHz were measured using a substitution method. The EUT was replaced by or horn antenna connected, the S.G. output was recorded and EIRP was calculated as follows: |
| | EIRP = S.G. output (dBm) + Antenna Gain (dBi) – Cable Loss (dB) |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.3 for details |
| Test results: | Pass |

7.8 Field strength of spurious radiation measurement

| Test Procedure: | The EUT was placed on an non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer. |
|-------------------|---|
| | During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations. |
| | The frequency range up to tenth harmonic was investigated for each of three fundamental frequency (low, middle and high channels). Once spurious emission was identified, the power of the emission was determined using the substitution method. |
| | The spurious emissions attenuation was calculated as the difference between radiated power at the fundamental frequency and the spurious emissions frequency. |
| | ERP / EIRP = S.G. output (dBm) + Antenna Gain(dB/dBi) – |
| | Cable Loss (dB) |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.3 for details |
| Test results: | Pass |

Remark:

- 1. The emission behaviour belongs to narrowband spurious emission.
- 2. Remark"---" means that the emission level is too low to be measured
- 3. The emission levels of below 1 GHz are very lower than the limit and not show in test report.

Remark:

- The emission behaviour belongs to narrowband spurious emission.
 Remark"---" means that the emission level is too low to be measured
- 3. The emission levels of below 1 GHz are very lower than the limit and not show in test report.

Shenzhen, China 518102

7.9 Frequency stability V.S. Temperature measurement

| Test Requirement: | FCC Part2.1055(a)(1)(b) |
|-------------------|---|
| Test Method: | FCC Part2.1055(a)(1)(b) |
| Limit: | 2.5ppm |
| Test setup: | Spectrum analyzer EUT Att. Variable Power Supply |
| | Note: Measurement setup for testing on Antenna connector |
| Test procedure: | The equipment under test was connected to an external DC power supply and input rated voltage. |
| | 2. RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators. |
| | 3. The EUT was placed inside the temperature chamber. |
| | 4. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT 25°C operating frequency as reference frequency. |
| | 5. Turn EUT off and set the chamber temperature to -20°C. After the temperature stabilized for approximately 30 minutes recorded the frequency. |
| | 6. Repeat step measure with 10°C increased per stage until the highest temperature of +50°C reached. |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.3 for details |
| Test results: | Pass |

7.10 Frequency stability V.S. Voltage measurement

| Test Requirement: | FCC Part2.1055(d)(1)(2) |
|-------------------|--|
| Test Method: | FCC Part2.1055(d)(1)(2) |
| Limit: | 2.5ppm |
| Test setup: | Spectrum analyzer EUT Att. Variable Power Supply |
| | Note: Measurement setup for testing on Antenna connector |
| Test procedure: | Set chamber temperature to 25°C. Use a variable DC power source to power the EUT and set the voltage to rated voltage. Set the spectrum analyzer RBW low enough to obtain the desired |
| | frequency resolution and recorded the frequency. |
| | 3. Reduce the input voltage to specified extreme voltage variation (+/- 15%) and endpoint, record the maximum frequency change. |
| Test Instruments: | Refer to section 6.0 for details |
| Test mode: | Refer to section 5.3 for details |
| Test results: | Pass |
